

Assignment-1.

classify the following data into structured, semi-structured and unstructured data:

1. Aadhaar database
2. Whatsapp messages
3. CCTV video
4. Hospital database
5. Facebook posts

⇒

1. ~~Aadh~~ Structured data:

Data is organised into fixed rows/columns, follows a defined schema - typically stored in relational databases.

1. Aadhaar database :

It is structured because stores fields like name, address, date of birth, Aadhaar number in a fixed tabular format.

2. Hospital database:

It is structured because stores patient records with defined fields such as patient ID, name, age, diagnosis, etc.

2. Semi-structured data:

It has some organizational metadata/tags but the core content doesn't fit rigid tables.

1. WhatsApp messages:

It is semi-structured because messages carry meta data (sender, receiver) but the actual message content (text, media) is free-form.

2. Facebook posts:

Semi-structured because it contains metadata (post ID, timestamp, etc.) while the post content (text, images) is unstructured.

3. unstructured data:

It does not have any predefined format or organization.

1. CCTV videos:

Unstructured because raw video/audio footage have no inherent tabular or tagged structure.
